The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. Performance current to the most recent month-end can be obtained by calling (425) 409-9500.

Short term performance, in particular, is not a good indication of the fund's future performance, and an investment should not be made based solely on returns. Returns beyond 1 year are annualized.

A fund's NAV is the sum of all its assets less any liabilities, divided by the number of shares outstanding. The market price is the most recent price at which the fund was traded.

Investing involves risk including loss of principal.

Diversification does not ensure a profit or protect against loss in declining markets.

As with all ETFs, Fund shares may be bought and sold in the secondary market at market prices. The market price normally should approximate the Fund's net asset value per share (NAV), but the market price sometimes may be higher or lower than the NAV. The Fund is new with a limited operating history.

Islamic religious law commonly known as Sharia has certain restrictions regarding finance and commercial activities permitted for Muslims, including interest restrictions and prohibited industries, which reduces the size of the overall universe in which the Fund can invest. The strategy to reduce the investable universe may limit investment opportunities and adversely affect the Fund's performance, especially in comparison to a more diversified fund.

Equity securities, such as common stocks, are subject to market, economic and business risks that may cause their prices to fluctuate.
